

Acknowledgments

I am indebted to many individuals and organizations for their parts in aiding the development of this work. In the paragraphs below I attempt to acknowledge those contributions. My apologies to any whose contributions I may have overlooked due to the long development of this work, which has now consumed parts of almost 30 years.

To all of my neuropterist friends and colleagues around the world, I offer my thanks for your past and continuing efforts to help build and improve the Bibliography by sending me your personal publication lists, specialized reference lists, "additions" lists, corrections notes, reprints, photocopies, digital files, etc., so that we can build an increasingly comprehensive and useful resource for our research community. It is not practicable to list all of you by name here, but your works constitute a substantial portion of the materials that are cited in and linked to the Bibliography. To date, more than 370 of you have explicitly granted personal permissions to the BoIN project to post of copies of your works. The success of this project as a comprehensive community resource depends critically upon your continued support and good will.

Several individuals have provided particularly noteworthy help in specialized areas. Levente Abrahám and András Bozsik have provided special assistance in treating the Hungarian neuropteran literature. For ten years in the 1990's and 2000's Agostino Letardi provided annual lists of errata and references not found in earlier versions of the Bibliography. These were very helpful in developing and correcting the citation list during that period and particularly emphasized the Italian literature. The assistance of Vladimir Makarkin has been indispensable in treating the Russian neuropterological literature. He has cheerfully responded to my numerous requests for translations, transliterations and corrections of Russian citations, and has provided copies of many important works treating both extant and fossil neuropterans. Florian Weihrach has provided special assistance with the recent neuropterological literature in German. Andy Whittington has provided information derived from the collection of neuropterological literature contained in the Royal Scottish Museum, contributing to the documentation of European, and particularly British, neuropterists of the late 19th and early 20th centuries. Peter McEwen, Lara Senior and John Ruberson have each, at different times, provided assistance with citations on economic neuroterology. Andy Whittington, Agostino Letardi and Levente Abrahám have provided special assistance in obtaining permissions from publishers in their countries in order to help develop the digital library aspects of the Bibliography.

Special thanks is due to my good friend and colleague Norm Penny who has supported and encouraged the Bibliography project throughout our long association. In late 1994 Norm helped push the Bibliography in the direction of electronic publication by arranging for the first online version (Version 4.0) to be implemented as a gopher site on a server at the California Academy of Sciences. All subsequent versions of the Bibliography have been delivered digitally, which greatly facilitated the extension of the Bibliography in the early 1990's into the digital library realm when easily distributable digital facsimile files in PDF format became increasingly popular and available. The continued support and encouragement of fellow bibliophile Horst Aspöck has also been much appreciated over the years.

During my years as a postdoctoral fellow (1991-1995) at the Smithsonian Institution (National Museum of Natural History), Oliver Flint provided unrestricted access to the extensive collection of neuropterid reprints then under his care. Access to this collection was especially important for documenting the separates of publications by Longinos Navás.

Graduate Students

Several graduate students have provided substantive assistance with different versions of the Bibliography. Joshua Jones (entomology) and Krishna Tadi (computer engineering) were largely responsible for the technical development of the first Lacewing Digital Library-based interface of the Bibliography (version 8.0). That interface has been continued and extended in version 9.0. Most of the graphical and design elements of this interface were initially produced by Joshua and implemented by Joshua and Krishna. Joshua also played an important role in helping to conceptualize the organization and presentation of page and data elements for the interface. Krishna undertook primarily responsibility for the more technical aspects of site networking, ColdFusion scripting associated with the site's searching and reporting functionality, and back-end database development and maintenance. For the current version, Rakesh Parvataneni (computer science) has assumed primary responsibility for technical implementation.

In 1997, computer science students Murtaza Sonaseeth and Ravi Wijayarathne were responsible for the technical development of Bibliography Version 6.0. That version, with its adjustable, three-frame, single screen, user interface was the first interactively searchable version of the Bibliography and was developed as part of a graduate course in computer-based Information Storage and Retrieval at Texas A&M University.

Undergraduate Students

Many undergraduate student workers have provided various kinds of assistance on the Bibliography project over the years. Perhaps the most significant of these contributions has been made by the team of students who have carefully produced, checked and processed the majority of the PDF files now linked to the Bibliography. I would like to thank the following students for their contributions in this regard (listed alphabetically; current students asterisked [*]): David Chaszar, Lisa Doty, *John Dumont, Sukhtej Gill, Shawn Hanrahan, Akash Krisna, Franklin Leung, Wilson Lu, *John McLemore, Landon Proctor. Other students have been involved in securing copies of papers for verification of bibliographic data and in managing and organizing the physical literature collection underlying the Bibliography; I thank them as well.

Libraries and Librarians

A special debt of gratitude is due the many librarians who have assisted me over the period of many years with the bibliographic research that is incorporated into the Bibliography. As a graduate student, postdoc and faculty member, respectively, I have made particularly significant use of the resources, facilities and services of the libraries of Cornell University, the Smithsonian Institution (especially the National Museum of Natural History) and Texas A&M University. Wolfgang Brunnbauer kindly provided access to a number of old and rare works contained in the library of the Naturhistorisches Museum Wien in 2005. The dedicated individuals associated with the libraries of these institutions in particular, but also the staffs of many other libraries in the United States and Europe that I have visited, have provided me with uniformly courteous and helpful services and with access to the collections under their care. As access to scientific literature resources becomes increasingly digital, it is unfortunate that the process of obtaining that information is also becoming increasingly faceless. It is all too easy to overlook the people who stand behind the new and old library services that we use. We must not forget the importance of libraries and the librarians that guide and nurture those resources.

Zheng Ye 'Lan' Yang, Head of Document Delivery Services, Texas A&M University Libraries, provided space for and oversight of the student workers who, over the course of a number of years, have produced most of the PDF files of scanned neuropterid literature that are linked to the current version of the Bibliography.

Cooperating Organizations

Many organizations from around the world have granted permissions that allow the Bibliography to make available as digital copies selected works that they have published. It is a pleasure to acknowledge the substantive cooperation that these organizations have provided in granting such permissions. A list of cooperating societies, institutions and publishers can be found on the [Cooperating Organizations](#) page, together with links to their respective web sites (where available).

Funding

Version 9.0 of the Bibliography was supported in part by the U.S. [National Science Foundation \(NSF\)](#) through the [Division of Environmental Biology \(DEB\)](#) program [Partnerships for Enhancing Expertise in Taxonomy \(PEET\)](#), grant #0933588.

Versions 7.04 to 8.00 of the Bibliography were supported in part by the U.S. [National Science Foundation](#) through [Division of Environmental Biology](#), [Systematic Biology and Biodiversity Inventories](#), grant #0416206. Support from this source facilitated the production of a large number PDF files that comprise a substantial portion of the primary and secondary taxonomic literature on the Neuropterida of the world. The substantive support provided under this grant allowed the Bibliography to expand from its initial emphasis on bibliographic citations into a significant digital library that provides open access to a growing body of scientific literature relevant to the global neuropterological research community.

Versions 6.x of the Bibliography were supported in part by the [Texas Higher Education Coordinating Board](#) through [Advanced Research Program](#) grant #999902-139. Host support for these versions was provided by the Center for the Study of Digital Libraries, a unit of the Texas A&M University Department of Computer Sciences.

In-kind support for the Bibliography project has been provided over the years by the [Department of Entomology of Texas A&M University](#), [Texas AgriLife Research](#) (formerly the Texas Agricultural Experiment Station), and the [Texas A&M University Libraries](#).
