[Introduction](#)[Define Fauna](#)

Abstract: An updated checklist of the Neuropterida (Raphidioptera, Megaloptera, and Neuroptera) of Slovenia is provided. Although the oldest documented record of a neuropteran occurring in Slovenia dates back to 1685, new occurrence records continue to be discovered. The checklist presented here is based on literature records, personal collections, and previously unpublished data obtained from specimens preserved in natural history collections. A total of 112 extant species are listed, placed in 42 genera, 12 families, and three orders. No Neuropterida fossils or extinct species are currently known from Slovenia.
